RIPRO Corporation, Japan

Action Plan for SDGs

SDGs

Subjects

Approaches

"Survey Marker" Innovation

By embedding sensors and IC chips into our signature Boundary Plastic Stake Marker, we are contributing to environmental protection, land preservation, and natural disaster prevention.

Material Recycling

By reusing plastic trash as our raw material for production, we are promoting recycling and environmental consciousness in our community.

Reuse Reduce Recycle (3R's)

We strive to economize resources in the production process. This is achieved by reusing excess material lost in the molding process, supplementing energy needs via our factory's solar panels, and circulating coolant through our underground tanks.

In 2018 we received the Minister of Economy, Trade, and Industry's Award at the conference for Promotion of the 3R's.

Community Service

As an engine of future economic growth for our community we endeavor to create jobs locally and further involve ourselves with local businesses and cross-sector cooperation.

2030

Building a recycling-oriented society through the synthesis of manufacturing, environment, and information

What is the SDGs ?

SDGs is an abbreviation for "Sustainable Development Goals", consist of 17 goals and 169 targets in order to solve social issues and achieve a better future by 2030.

SDGs is a set of international development goals unanimously adopted by the United Nations (193 countries) at the United Nations Summit in September 2015.

SUSTAINABLE DEVELOPMENT GOALS
